

Abstract of the Disclosure

5 A fiber mesh net is insert molded into an interior
cavity of a cover structure of a portable electronic
device such as a cellular or radio telephone to provide
EMI shielding. The fiber mesh net is also bonded to
one surface of a polymer sheet which additionally
carries electronic circuitry on its opposite side to
form a laminate which is inserted molded into a cover
structure to extend electrical circuitry functionality
10 via selected fibers of the fiber mesh net for access
from the electronic device cover.
